By identifying and eliminating sources of variation with special causes, the process will have predictable performance and be able to determine the capacity of the process, as expressed by the appropriate indicators, to meet the requirements. It includes data collection, analysis and reporting u. Life AEnsuring maturity level Ă ă ĂĂa guideline for enterprises in the automotive industry, improving product quality from the start of customer cooperation for all parts, components and systems in the supply chain. When abolishing presentation standards, account is taken of customers' individual expectations, product variety, and considered number of documents. IATF 16949's main tools are Advanced Product Quality Planning (APQP), Production Part Approval Process (PPAP), Potential Failure Modes and Effects Analysis (FMEA), Statistical Process Control (SPC), and Measurement System Analysis (MSA). These basic tools are often difficult for the auditors to understand and audit the application. The German approach defines six Areas for which, as agreed with the client, appropriate evidence must be prepared. The new AIAG and VDA Handbook has been developed by a global team of OEM experts and Level 1 suppliers. The absolute advantage of this product is that it classifies the risk and communicates in the supply chain between the stakeholders, i. e. the customer-supplier. This manual is copyrighted by AIAG and VDA because of their collaboration to combine the American and German approaches. You can also join me in my private Facebook group: QualityWise ISO 9001 and IATF 16949 Group. Please let me know in the comment! Thank you for your presence.
